Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2-5 and 8-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. For claims 2 and 8, it is misdescriptive to state that the first elongated rail is slidable relative to and along the guide member, since it is the guide members that moves along the first elongated rail.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6-9 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Worrell et al (4,637,666). Worrell teaches a worktable (Fig. 1) comprising: a work platform (264); and a multidirectional coupling for operatively attaching said work platform to an external structure (14), said multidirectional coupling comprising: a first linear assembly comprising a first translation member (Fig. 4;134,110) and a second translation member (rollers 182,188) engaging said first translation member and linearly movable relative to and along said first translation member between first and second

limit positions and according to a first translation axis; a second linear assembly (50,52) comprising a third translation member (200) and a fourth translation member (201) engaging said third translation member and linearly movable relative to and along said third translation member between third and fourth limit positions and according to a second translation axis that is transversal to said first translation axis; and a swivel assembly (238) comprising a first swivel member (with 236) attached to the second rail (200 via 201) and a second swivel member (with 248) engaging said first swivel member and rotatable relative to said first swivel member about a swiveling axis that is transversal to both said first and said second translation axes; wherein said work platform is allowed to be displaced along said first and second translation axes and rotated about said swiveling axis at any position of said work platform when said multidirectional coupling operatively attaches said work platform to the external structure.

For claims 2 and 8, using the corrected first rail/guide member relationship, Worrell teaches said second and third translation member are integrally attached to a guide member (46), said first translation member being a first elongated rail (134,110) wherein the guide member is slidable relative to and along the member along said translation axis by the engagement of said first rail on said guide member, and said fourth translation member being a second elongated rail (201) slidable relative to and along said guide member along said second translation axis by the engagement of said second rail on said guide member.

Allowable Subject Matter

Claims 4, 5, 10 and 11 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Janet M. Wilkens whose telephone number is (571) 272-6869. The examiner can normally be reached on Monday-Thursday.
